

Micro Server Level 2—MS2

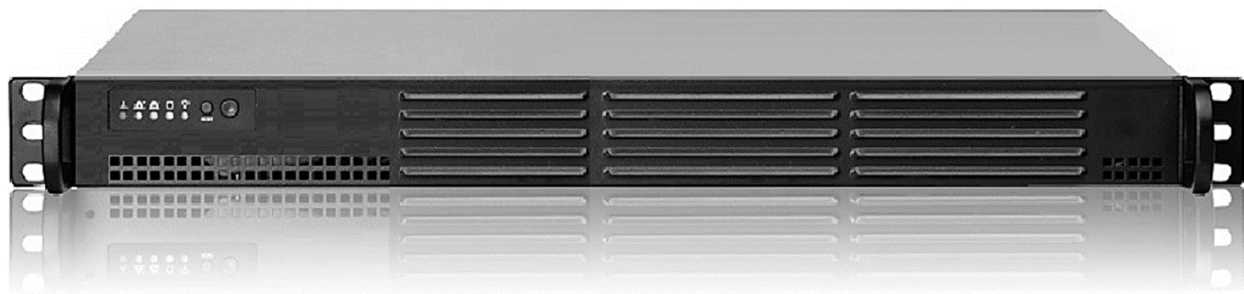

The Micro Server Level 2 provides a cost effective, easy to use, solution for Modbus, BACnet and SNMP protocol transformation.

Description:

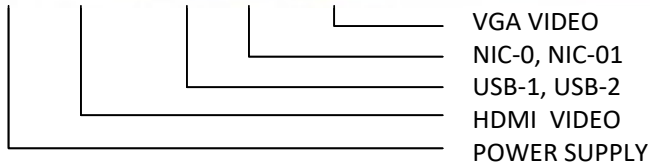

MS2 provides a quick, simple and cost-effective way to add data transformation and data monitoring products for Network Management and Building Management Systems. The MS2 provides multiple protocol support for a maximum of 64 devices. The MS2 is in a standard rack-mount package, designed to be installed in equipment rooms, Telco or standard racks.

The MS2 supports devices over TCP/IP as well as the serial communication ports available on the unit. Devices connected over multiple ports are supported simultaneously. Multiple devices are also supported through daisy-chaining (multi-drop) at the serial ports. Users must adhere to protocol and electrical standards for proper operation. Converter kits are also available for 2 / 4-wire devices to USB when connecting to the MS2.
